

EXTREME earth

Class 6 have been expanding their exploration of volcanos in geography using technology. They went on a fact-finding mission to complete a spreadsheet table on the locations, sizes and active status of volcanos around the world, then they used this data to create informative tables:

Class 6 then used their knowledge of how volcanos form and erupt to create an animation of the process using Scratch. The cartoons showed how the lava erupts from the crater and vents, then travels down the side of the volcano to create new rock layers.
