

Class 8

We had Amanda in to visit our class and she completed a DT workshop with us. We designed, made and evaluated a steady hand game using our knowledge of electricity and circuits from our Science lessons.

We have been focusing on Fables during our writing lessons. Before we rewrote a fable in our own words, we used drama techniques to develop our story telling skills.

We have been enjoying learning about electricity in our Science lessons. We have been doing lots of practical activities such as building circuits and sorting objects depending on whether they are insulators or conductors.

During Mental Health Week, we learned about how to keep a healthy mind-set and who we can go to for support. We focused on building connections with others, and built paper chains to represent this.
