

Class 8

While learning about the Maya Civilisation, we had great fun making ancient Maya hot chocolate! We learned all about how valuable cacao beans were and how they were used in medicines, for ceremonies and for money!

We celebrated STEM Day by conducting a Science experiment that linked with our learning in Geography and PSHE: To investigate which material would be the most effective as a water filter. We tested rocks, a tea towel, coffee filters and cotton wool!

During STEM Day, we also enhanced our engineering skills through designing and testing bridges to discover which would act as the strongest to hold the most weight. We learned about how architects design bridges and engineers bring them to life.

During our Computing lessons, we have been learning about how to create a QR code. We used this to enhance our learning in History by scanning one another's QR codes to answer questions about the Maya Civilisation.
