

Class R1

We had lots of fun on STEM day! We built models with lolly sticks and pegs, investigated different animal faces and built rainbows out of Lego! We had to think about how we could combine the coloured pieces to make the rainbow shape.

We have been learning about butterfly life cycles in reception! **We have our very own caterpillars that have now turned to cocoons! We are waiting for them to become butterflies before half term!** We acted out each stage of the life cycle with our friends!

In R.E. we have been exploring growth in nature during the lead up to Easter. We planted some cress seeds on the letters of Easter and watched them grow! They are still growing now!

In topic, we have been looking out for signs of spring! We went on a spring nature hunt around Father Dever's garden. We saw blossoms and daffodils growing and lots more green leaves! We then drew a picture of what we found.
