

Class 10

To learn the phases of the moon, Class 10 created a lunar cycle out of Oreo cookies. This helped to embed our learning while providing a yummy snack!

In Science, we learned about electrical conductors and used a variety of metals to determine which metal made a bulb shine the brightest.

In Religion we learned about the sacrament of marriage and reenacted scenes between a couple and their parish priest.

This term we had a Design & Technology workshop where we designed and created a maths buzzer game for children.
