

Class 10

We took a trip to St. Peter's RC High School for a fantastic morning of flying drones and programming robots!

We had an eco workshop by Biffa where we learned all about waste processing, as well as ways we can reduce, reuse and recycle.

We attended a talk by United Utilities, where we learned about the water cycle, how water gets to and from our houses, and how to save water.

We combined our literacy, topic and computing work to create webpages for a news report on our school's eco efforts. Click the picture to have a look!
