

Class 8

We had great fun celebrating World Book Day! We dressed up as our favourite characters, joined in with a poster competition, brought in our favourite book to share with the class, wrote book reviews and made our own bookmarks.

We were very lucky to be visited by 'Bubbly Beth' from United Utilities! We learned all about the different states of water, the water cycle and the journey of water to our homes. We were inspired to become H₂O heroes!

We have combined our learning in Geography and Computing to create a fact file about rivers on Microsoft word which includes QR codes. We have enjoyed scanning each other's QR codes to find out more information.

We created our own 'rain cloud' in a jar while learning about condensation and precipitation. The shaving cream represented the clouds, the water represented the air and the coloured water represented rain. As the coloured water saturated the "cloud", it became heavy and eventually was so heavy that it could no longer hold the water.
