

Class 1

As part of our Art project this term we made a Coral Reef collage. We had to choose materials that we could use. We investigated the texture and the flexibility of the materials.

In Maths we were looking at numbers to 50. We used our Base 10 to find one more and one less than a given number.

In our Maths lessons we have been learning about capacity and volume. We had to estimate the amount of glass it would take to fill some objects.

As part of our History topic on Toys Freshwater Theatre came in and brought us to the magical world of toys past and present.
