

## Class 11

In Geography, we revised our map skills and started to learn about rivers. We visited Quarry Bank to explore the River Bollin. While there, we carried out two investigations to test the speed of the river and pond dipped to see what lives in its tributary.

In Art, we explored colour theory and practised making different colours on the extended colour wheel in preparation for our watercolour project creating scenes from the Battle of Dunkirk. We also trialed different techniques: wet-on-wet, wet-on-dry and stippling.

During our 'Evolution and Inheritance' topic in Science, we explored the tree of life and the evolution of species over time. We created our own unique creatures considering the specific adaptive traits it would need in order to survive in its habitat.

We have been putting our faith into action through our Harvest collection across school. Here you can see our class's contribution to the donations which were dropped off to Cornerstones in Manchester City Centre.
