

## Class 11

In Design and Technology this half term, we were learning about pulleys and gears. With Amanda, once we had explored how different sized pulleys operate, we each made a motorised vehicle.

As part of our Science topic, we have learned all about the circulatory system. To bring this to life, we dissected a lamb's heart to explore the four chambers as well as identifying the journey the blood would make.

In R.E., we have prepared for Christmas by understanding the prophecies told in the Old Testament and God's fulfilment of these promises by sending His only son to save us. We each wrote an Advent promised linked to a piece of scripture from John's Gospel.

In History, we started our WW2 topic and have learnt about The Blitz. We identified measures that residents had to take during the 'blackout' as well as learning about the continuous bombing that London faced.
