

Class 13

As part of our learning about the circulatory system, we explored a lamb's heart and identified the 4 chambers, arteries and veins. Through this practical activity, we gained a much better understanding of the human heart and how our circulatory system works.

In our DT lessons, we learned all about pulleys and created our own motorised vehicles. We got very creative during the design process, and as you can see in the photo above, fabulous vehicles were made.

In our history lessons, we learned about primary and secondary sources and discussed their reliability. We also learned about propaganda, bias and exaggeration before being tasked with analysing a range of sources on the Evacuation of Dunkirk.

In our religion lessons, we read psalms that celebrate God's wonderful creation, and we discussed our role as stewards of the earth. We then created these fantastic watercolour paintings, adding scripture from the psalms.
